Introduction to Academic English for Undergraduates

-Literature Review

Dr. Delin KONG, Steven

School of Foreign Languages

Huazhong University of Science and Technology

What is the general
structure of an
academic paper?

The **IMRaD** structure of an academic paper (Wu, 2011)

What is a
literature review?

- A literature review is a document or section of a document that **collects key sources on a topic and discusses those sources in conversation with each other** (also called **synthesis**).
- The literature review is **an important genre** in **many disciplines**, not just literature (i.e., the study of works of literature such as novels and plays).
- When we say, “literature review” or refer to “the literature,” we are talking about **the research (scholarship) in a given field**.

文献综述

It seems that there is not a specific part entitled “**literature review**”.

Where can the **literature review** part fit into this model?

- All good-quality journal articles will include **a small Literature Review after the Introduction paragraph.**
- Sometimes, it is listed as a Literature Review section; sometimes, it is merged into the Introduction section.

Primary purposes for a literature review

Knowledge synthesis

By meticulously analyzing and summarizing numerous sources, you create a cohesive picture of the current state of understanding within your field.

01

Identifying Research Gaps

It helps reveal where more research is needed, whether it's to address unanswered questions or to update outdated information.

02

Contextualising Your Research

It helps readers understand the historical, theoretical and methodological foundations of your work. This context is essential for establishing the relevance and significance of your research.

03

Critical Evaluation

This critical analysis ensures that only the most relevant and reliable information is integrated into your research, improving its overall integrity.

04

Building a Strong Argument

You showcase your deep understanding of the subject matter and demonstrate that your work is rooted in the existed body of knowledge.

05

Contributing to a Scholarly Discourse

It's your way of adding your voice to the academic conversation, helping to shape and advance the field's understanding.

06

What is the
structure of a
literature review?

The general structure of a literature review

Introduction

Body

Conclusion

- Most literature reviews use a **basic introduction-body-conclusion structure**.
- If your lit review is part of a larger paper, the introduction and conclusion pieces maybe just a few sentences while **you focus most of your attention on the body**.
- If your lit review is a standalone piece, the **introduction and conclusion take up more space** and give you a place to discuss your goals, research methods, and conclusions separately from where you discuss the literature itself.

The general structure of a literature review

Introduction

An introductory paragraph that **explains what your working topic and thesis is**

A forecast of **key topics or texts** that will appear in the review

Potentially, a description of **how you found sources and how you analyzed them** for inclusion and discussion in the review (more often found in published, standalone literature reviews than in lit review sections in an article or research paper).

The general structure of a literature review

Body

Summarize and synthesize: Give **an overview of the main points** of each source and combine them into a coherent whole

Analyze and interpret: Don't just paraphrase other researchers – **add your own interpretations where possible**, discussing the significance of findings in relation to the literature as a whole

Critically Evaluate: Mention the **strengths and weaknesses** of your sources

Write in well-structured paragraphs: Use **transition words and topic sentences** to draw connections, comparisons, and contrasts.

The general structure of a literature review

Conclusion

Summarize the **key findings** you have taken from the literature and emphasize their significance

Connect it back to your primary research question

The general structure of a literature review

What is the process
of writing a
literature review?

How to **choose**
and refine your
topic?

How to choose and decide your topic?

How to choose and decide your research question/topic?

“the niche”

At this point, you can
adjust the scope of your
article or literature review.

- A research topic contains one or more than one answerable, focused questions that help to limit the scope of your research and writing within a broader topic.
- Your research question(s) needs to be answerable within your word limit.

How to develop research questions based on a research topic?

Four steps in developing working research questions

1

Understand the broader context of the research topic

Make sure you understand the larger issues and motivations behind your topic.

2

Identify gaps and specific areas of interest

Break down the topic into areas that need more exploration or clarification.

3

Formulate open-ended questions

Good research questions are typically open-ended and focus on exploration, explanation, or understanding, rather than yes/no answers.

4

Make questions specific and manageable

Ensure that each question is specific enough to be investigated within the scope of your study, yet broad enough to allow for in-depth analysis.

Example: An In-Depth Analysis of Toilet Paper Quality in HUST Washrooms.

Step 1: Understand the Broader Context of the Topic

Consider why toilet paper quality might actually matter to students and staff:

- How does toilet paper quality impact user satisfaction with campus facilities?
- What variations in quality might exist across campus?
- Could certain brands or types of toilet paper improve the experience?

Step 2: Identify Specific Areas of Interest

For a topic like this, you can explore:

- Quality and Consistency: Are there differences in quality across campus buildings?
- User Satisfaction: How do students and staff feel about the current quality?
- Potential Improvements: What changes would users like to see?

Example: An In-Depth Analysis of Toilet Paper Quality in HUST Washrooms.

Step 3: Formulate Open-Ended Questions

- **Exploratory Questions:** focus on uncovering insights or understanding unknown aspects of a topic
- **Descriptive Questions:** aim to detail characteristics or properties of a specific phenomenon
- **Explanatory Questions:** seek to clarify reasons or causes behind a phenomenon
- **Comparative Questions:** focus on identifying differences or similarities between two or more entities
- **Solution-Focused Questions:** aim to find practical solutions or improvements for a specific issue

Example: An In-Depth Analysis of Toilet Paper Quality in HUST Washrooms.

Step 4: Make Questions Specific and Manageable

- **Exploratory:** What are the primary characteristics of toilet paper quality in HUST washrooms, and are there significant variations across different campus locations?
- **Descriptive:** How do students and staff perceive and rate the quality of toilet paper provided in HUST's washrooms?
- **Explanatory:** How does the quality of toilet paper impact users' overall satisfaction with HUST washroom facilities?
- **Comparative:** How does the toilet paper quality in high-traffic HUST buildings compare to that in less frequented locations?
- **Solution-Focused:** What feasible improvements could HUST make to enhance the quality of toilet paper, and what impact might this have on user satisfaction?

- The research questions and/or aims of your literature review is often stated at the end of the introduction section.

The research questions will guide the structure of the literature review as **GOLDEN THREAD!**

How to **select**
the literature?

Four steps in selecting the literature

**Outlining Working
Research Questions**

Identify key terms and concepts

**Choose Appropriate Databases
and Sources**

Conduct literature searches

An In-Depth Analysis of Toilet Paper Quality in HUST Washrooms.

Step 2: Identify key terms and concepts

Working Research Questions:

- What are the primary characteristics of **toilet paper quality** in HUST washrooms, and are there significant variations across different campus locations?
- How do **students and staff perceive and rate** the quality of toilet paper provided in HUST's washrooms?
- How does the quality of toilet paper impact **users' overall satisfaction** with HUST **washroom facilities**?
- How does the toilet paper quality **in high-traffic HUST buildings** compare to that in **less frequented locations**?
- What **feasible improvements** could HUST make to **enhance the quality of toilet paper**, and what impact might this have on user satisfaction?

An In-Depth Analysis of Toilet Paper Quality in HUST Washrooms.

Step 2: Identify key terms and concepts

Key terms and concepts:

- Toilet Paper Quality
- User Perception
- User Satisfaction
- Washroom Facilities
- Comparative Analysis
- Campus Locations
- Feasible Improvements
- Impact Assessment

An In-Depth Analysis of Toilet Paper Quality in HUST Washrooms.

Step 3: Choose Appropriate **Databases** and Sources

ELSEVIER
Scopus

WEB OF SCIENCE

An In-Depth Analysis of Toilet Paper Quality in HUST Washrooms.

Dissertations/Theses

Conference papers

Step 3: Choose Appropriate Databases and **Sources**

Scholarly articles

Books

Selecting the literature

- Your review should be **selective**.
- A common mistake is to **include everything** you have read regardless of its relevance.
- You need to develop your own criteria for the bodies of literature – and the scholars – that you end up including in the literature review and those you exclude. Your criteria should always include:
 - ✓ **relevance** to your study
 - ✓ **importance** to the field

Selecting the literature

Relevance: A useful way of thinking about the literature review is to visualise it as a dinner party (Kamler & Thomson, 2006). You are the host, and you decide who is invited and who sits where, depending on how much they can contribute to the conversation about your topic. Relevance is crucial.

Importance: Another way of looking at the process, particularly if you examine several topics (or variables), is to think of yourself as a film director (Rudestam & Newton, 1992). You can think of providing your audience with:

- ✓ **long shots** to provide a solid sense of the background
- ✓ **middle distance shots** where the key figures and elements to be examined are brought clearly into view
- ✓ **close-up shots** where the precise focus of your work is pinpointed.

Selecting the literature

General → Specific

Topic background → Supporting studies

Importance:

- ✓ **long shots** to provide a solid sense of the background
- ✓ **middle distance shots** where the key figures and elements to be examined are brought clearly into view
- ✓ **close-up shots** where the precise focus of your work is pinpointed.

Selecting the literature

Relevance: A useful way of thinking about the literature review is to visualise it as a dinner party (Kamler & Thomson, 2006). You are the host, and you decide who is invited and who sits where, depending on how much they can contribute to the conversation about your topic. Relevance is crucial.

Some common Literature exclusion criteria:

- Not addressing any of the key terms.
- Not peer-reviewed or lacking academic rigor.
- Published more than 10 years ago unless foundational.
- Methods not relevant to your study design.
- Published in a language other than English.
- Focusing on populations or contexts not applicable to your research context.

Selecting the literature

How to apply those
exclusion criteria?

Selecting the literature

Title Scan

- First Pass: Quickly scan titles for relevance. Eliminate any papers that clearly don't address your key topics.
- Goal: Aim to cut the list down by at least half, if possible, at this stage.

Abstract Review

- Second Pass: Review abstracts in batches of 20–50 papers, focusing on core terms and scope. This is where you can filter out papers that don't directly address your research questions.
- Goal: Reduce the selection further by dismissing papers that are off-topic or only loosely related.

Selecting the literature

How to **analyse**
and synthesise?

Analyzing and synthesizing the literature

Two tools

Literature matrix (Study-based)

Author	Year	Title	Aims	Method	Sample	Conclusion	Comments
Willis	2009	Memory efficiency and critical thinking among entry-level students	Test whether memory correlates positively with critical thinking	Quiz	50	Good memory positively influences critical thinking	Interesting quiz structure. Framing of critical thinking and memory is too similar, leading to exaggerated correlation.
Qinhua	2011	De Bono Mnemonic places technique and note taking	Examine how the De Bono mnemonic places technique influences note taking	Quiz and note analysis	12	Significant improvement (20%) in 6-strong sample.	One of the better papers on memory impact of note taking. Method useful for constructing experiment for testing critical thinking skills
Summers	2007						
D'Brant	2012

Mind map

Analyzing and synthesizing the literature

- After locating and analyzing a range of sources, you should synthesize the relevant sources. Synthesizing means connecting, linking and positioning sources against each other in order to identify the recurring themes, trends and areas of agreement or disagreement within your research field.
- **Example:**
- After reading and analyzing individual sources, you have identified a key concept relating to your research topic as well as a key resource (A) relating to that concept.
- The argument in resource (A) is supported by another article (B), which is in turn supported by article (D).
- However, you have also found article (C), which contradicts the argument presented in resource (A).
- One way to synthesize these texts, is to group together the texts supporting your key resource (articles B and D), and explain that article (C) presents contradictory results. Then, you would need to explain the differences and/or reasons for the contradictory results.

Analyzing and synthesizing the literature

- **Introduce the Key Argument in Resource (A)**
- Resource (A) posits that “the quality of toilet paper in HUST washrooms significantly affects user satisfaction among students and staff”. The study suggests that higher-quality toilet paper leads to greater overall satisfaction with washroom facilities.
- **Present the Supporting Evidence (Articles B and D)**
- Article (B) provides empirical data supporting this argument, showing that 85% of students rated the quality of toilet paper as a critical factor in their overall satisfaction with restroom facilities at HUST.
- Similarly, Article (D) echoes these results by analyzing user feedback and concludes that improved toilet paper quality correlates with higher satisfaction ratings. The authors argue that this relationship can be attributed to users’ expectations of cleanliness and comfort, which are met by quality toilet paper.
- **Introduce the Contradictory Evidence (Article C)**
- However, Article (C) presents a contrasting view, indicating that “the quality of toilet paper does not significantly influence user satisfaction”. This study, which examined user perceptions across multiple universities, found that factors such as the overall cleanliness of the washroom and accessibility were more critical determinants of satisfaction than the quality of toilet paper itself.

Analyzing and synthesizing the literature

- **Analyze Possible Reasons for the Contradiction**
- The discrepancy between these findings could stem from differences in the study populations and methodologies. Article (C) utilized a broader sample across different institutions, which may dilute the specific context of HUST. Additionally, it employed a qualitative approach, relying on focus groups that may not capture the quantitative nuances reflected in the surveys of Articles (B) and (D).
- **Discuss the Implications of the Contradictory Evidence**
- The existence of contrasting evidence from Article (C) raises important questions about the generalizability of the findings in Resource (A). While it appears that toilet paper quality plays a role in user satisfaction at HUST, Article (C) suggests that this may not be universally applicable across other contexts. This could indicate that factors like facility cleanliness and user convenience are paramount, possibly overshadowing the impact of toilet paper quality.
- **Conclude with a Synthesis of the Evidence**
- In conclusion, while Resource (A) is robustly supported by Articles (B) and (D), which highlight the importance of toilet paper quality in enhancing user satisfaction, the insights from Article (C) invite a more nuanced discussion. Acknowledging the role of contextual factors, such as overall facility management, is essential in forming a comprehensive understanding of user satisfaction in washroom facilities. Therefore, future research should consider both quality and cleanliness to provide a holistic view of user experiences in washrooms at HUST.

How to **develop**
your argument?

An In-Depth Analysis of Toilet Paper Quality in HUST Washrooms.

Working Research Questions:

- What are the primary characteristics of toilet paper quality in HUST washrooms, and are there significant variations across different campus locations?
- How do students and staff perceive and rate the quality of toilet paper provided in HUST's washrooms?
- How does the quality of toilet paper impact users' overall satisfaction with HUST washroom facilities?
- How does the toilet paper quality in high-traffic HUST buildings compare to that in less frequented locations?
- What feasible improvements could HUST make to enhance the quality of toilet paper, and what impact might this have on user satisfaction?

An In-Depth Analysis of Toilet Paper Quality in HUST Washrooms.

Working Research Questions:

- **What are the primary characteristics of toilet paper quality in HUST washrooms, and are there significant variations across different campus locations?**
 - How do students and staff perceive and rate the quality of toilet paper provided in HUST's washrooms?
 - How does the quality of toilet paper impact users' overall satisfaction with HUST washroom facilities?
 - How does the toilet paper quality in high-traffic HUST buildings compare to that in less frequented locations?
 - What feasible improvements could HUST make to enhance the quality of toilet paper, and what impact might this have on user satisfaction?
- **Retained**
 - **Rationale:** This question remains crucial. Literature indicates that quality characteristics such as softness, strength, and thickness are essential for user satisfaction. For example, a study by Katz and Smith (2019) found that softer toilet paper significantly influenced user preference in university washrooms, underscoring the importance of these characteristics.

An In-Depth Analysis of Toilet Paper Quality in HUST Washrooms.

Working Research Questions:

- What are the primary characteristics of toilet paper quality in HUST washrooms, and are there significant variations across different campus locations?
 - **How do students and staff perceive and rate the quality of toilet paper provided in HUST's washrooms?**
 - How does the quality of toilet paper impact users' overall satisfaction with HUST washroom facilities?
 - How does the toilet paper quality in high-traffic HUST buildings compare to that in less frequented locations?
 - What feasible improvements could HUST make to enhance the quality of toilet paper, and what impact might this have on user satisfaction?
- **Refined**
 - *How do students and staff perceive and rate the quality of toilet paper provided in HUST's washrooms, and what demographic factors influence these perceptions?*
 - **Rationale:** Literature reviews revealed that demographic factors such as age and nationality can affect user preferences. For instance, Lee et al. (2020) found that younger users preferred softer toilet paper, while older users valued durability more. By including demographic factors, the question captures a more nuanced understanding of user perceptions.

An In-Depth Analysis of Toilet Paper Quality in HUST Washrooms.

Working Research Questions:

- What are the primary characteristics of toilet paper quality in HUST washrooms, and are there significant variations across different campus locations?
 - How do students and staff perceive and rate the quality of toilet paper provided in HUST's washrooms?
 - **How does the quality of toilet paper impact users' overall satisfaction with HUST washroom facilities?**
 - How does the toilet paper quality in high-traffic HUST buildings compare to that in less frequented locations?
 - What feasible improvements could HUST make to enhance the quality of toilet paper, and what impact might this have on user satisfaction?
- **Refined**
 - *How does the quality of toilet paper and the overall cleanliness of washroom facilities impact user satisfaction among students and staff at HUST?*
 - **Rationale:** A study by Chen and Zhang (2021) highlighted that users rated overall satisfaction higher in cleaner facilities, regardless of the toilet paper quality. The focus on cleanliness allows the research to address broader concerns impacting user experiences while still considering the quality of toilet paper.

An In-Depth Analysis of Toilet Paper Quality in HUST Washrooms.

Working Research Questions:

- What are the primary characteristics of toilet paper quality in HUST washrooms, and are there significant variations across different campus locations?
 - How do students and staff perceive and rate the quality of toilet paper provided in HUST's washrooms?
 - How does the quality of toilet paper impact users' overall satisfaction with HUST washroom facilities?
 - **How does the toilet paper quality in high-traffic HUST buildings compare to that in less frequented locations?**
 - What feasible improvements could HUST make to enhance the quality of toilet paper, and what impact might this have on user satisfaction?
- **Removed**
 - **Rationale:** While interesting, this question is narrower and can be encompassed within the first question about variations in quality across campus locations. The literature indicates that high-traffic areas tend to experience more wear and tear on toilet paper quality (e.g., Miller et al., 2018), but these findings can be discussed in the context of overall quality assessments.

An In-Depth Analysis of Toilet Paper Quality in HUST Washrooms.

Working Research Questions:

- What are the primary characteristics of toilet paper quality in HUST washrooms, and are there significant variations across different campus locations?
 - How do students and staff perceive and rate the quality of toilet paper provided in HUST's washrooms?
 - How does the quality of toilet paper impact users' overall satisfaction with HUST washroom facilities?
 - How does the toilet paper quality in high-traffic HUST buildings compare to that in less frequented locations?
 - **What feasible improvements could HUST make to enhance the quality of toilet paper, and what impact might this have on user satisfaction?**
- **Removed**
 - **Rationale:** This question was deemed less critical because the primary focus is on understanding perceptions and satisfaction. Insights from the literature may suggest improvements, but establishing the current state of quality and satisfaction is foundational. Research by Gao et al. (2022) pointed out that understanding user experiences is essential before implementing changes.

Reworking on the research questions

Working Research Questions:

- What are the primary characteristics of toilet paper quality in HUST washrooms, and are there significant variations across different campus locations?
- How do students and staff perceive and rate the quality of toilet paper provided in HUST's washrooms?
- How does the quality of toilet paper impact users' overall satisfaction with HUST washroom facilities?
- How does the toilet paper quality in high-traffic HUST buildings compare to that in less frequented locations?
- What feasible improvements could HUST make to enhance the quality of toilet paper, and what impact might this have on user satisfaction?

Finalized Research Questions:

- What are the primary characteristics of toilet paper quality in HUST washrooms, and are there significant variations across different campus locations?
- How do students and staff perceive and rate the quality of toilet paper provided in HUST's washrooms, and what demographic factors influence these perceptions?
- How does the quality of toilet paper and the overall cleanliness of washroom facilities impact user satisfaction among students and staff at HUST?

The refined research questions are now more focused and informed by literature findings, providing a solid framework for investigating toilet paper quality and user satisfaction at HUST. By supporting the refinement process with relevant literature examples, it underscores the importance of each question in contributing to a comprehensive understanding of the research topic.

The Literature Review Writing Process

- ✓ Not a linear process
- ✓ Go back and check the literature while reformulating ideas
- ✓ Work on the literature before, during, and after your study
- ✓ These steps can be applied to all kinds of literature reviews

The general structure of a literature review

THE HAMBURGER STRUCTURE

THE FUNNEL SHAPE

A sample literature review by ChatGPT

The role of toilet paper quality in shaping user satisfaction has received attention in studies on public and university facilities, with key quality characteristics emerging as essential satisfaction drivers. Katz and Smith (2019) identified softness, thickness, and durability as the primary attributes that users associate with high-quality toilet paper. Their survey across multiple universities revealed that 82% of respondents prioritized softness, viewing it as a marker of comfort and quality. Durability and thickness followed closely, particularly in high-traffic environments where thin or easily degradable paper quickly led to frustration and complaints. Similarly, Miller et al. (2018) found that students' perceptions of quality diminished significantly in high-traffic facilities where wear-and-tear issues were more prevalent, underscoring the importance of consistent quality control across campus locations.

Demographic factors, such as age, nationality, and familiarity with quality standards, also play a substantial role in shaping user satisfaction with toilet paper quality. In a study by Lee et al. (2020), international students, particularly those from Western countries, expressed greater dissatisfaction with lower-grade toilet paper, a sentiment attributed to higher expectations from their experiences in home countries where premium-quality amenities are more common. Conversely, local students, while generally expressing contentment with available amenities, were less satisfied in high-use, low-quality settings. Chen and Zhao (2021) examined differences in age-based preferences, noting that younger users often prioritized softness and comfort, while older users tended to value durability and environmental sustainability. These findings highlight that satisfaction is a multifaceted issue shaped by cultural and demographic factors, suggesting that a one-size-fits-all approach to washroom supplies may not meet the diverse expectations of HUST's campus community.

While toilet paper quality is essential, it is only one factor in user satisfaction with washroom facilities. Gao et al. (2022) observed that cleanliness and maintenance standards often have a more significant influence on user satisfaction than toilet paper quality alone. In their study, respondents reported that even high-quality toilet paper could not compensate for a lack of cleanliness, emphasizing the importance of maintaining hygienic facilities. Chen and Zhang (2021) similarly found that user satisfaction was highest in washrooms that were both clean and well-stocked with quality supplies. They concluded that timely maintenance, consistent restocking, and high hygiene standards are critical to positive washroom experiences. This perspective suggests that improving HUST's washroom facilities may require a more holistic approach, one that combines enhanced toilet paper quality with strict cleanliness protocols to fully meet user expectations.

In summary, the literature emphasizes that toilet paper quality, particularly in terms of softness, thickness, and durability, is a core aspect of user satisfaction with public facilities. Demographic influences, especially those related to cultural expectations and age, complicate this relationship, indicating a need for varied facility management strategies. Additionally, while quality matters, cleanliness and maintenance emerge as equally important factors in determining overall satisfaction, reinforcing the need for a comprehensive approach to washroom management at HUST.

Introduction

This part of the introduction aligns with the top of the funnel, starting broadly by emphasizing the importance of toilet paper quality as a driver of user satisfaction.

Body

The part delves deeper into more specific studies, systematically discussing factors that affect satisfaction levels among different demographic groups. Here, the literature review becomes narrower, moving down the funnel by analyzing specific research findings related to demographic differences, cultural expectations, and maintenance issues.

Conclusion

The part wraps up the literature review with a synthesis of key findings, representing the bottom of the funnel as it refocuses on the specific research context of HUST.

The sample literature review exemplifies the hamburger structure and funnel shape by:

- Starting broadly with general findings on the importance of toilet paper quality
- Narrowing to specific attributes and demographic factors affecting satisfaction
- Concluding with a focused recommendation on addressing the particular needs of HUST's community.

Challenges in Writing Literature Review

It is time-consuming

It might lack adequate resources

It is daunting and frustrating.

But...

It is also
rewarding!

Research is to see what everybody
else has seen, and to think what
nobody else has thought.

Albert Szent-Györgyi
