

2025年春季课程期末考核作业要求 (3 PPT&3篇文章, 小组完成)

批判性阅读+分析文 (二选一)

- 大脑扫描显示, 小狗也是人
- Why are the Dutch so tall?

目的: 学习阅读因果论证文, 从而初步掌握批判性阅读科学论文的基本思路。

过程: 进行批判性阅读过程 (分析+评估) 然后依据阅读写出分析文 (样本: p. 232-233)。

要求: 阅读 - 分析出议题、立场、论证、和评估论证质量, 了解文中建立结论的脉络和原则, 运用6方面评估考察其优缺点, 特别注意评估因果论证的模式和标准的运用。

写作 - 简述原文论证脉络, 然后叙述自己的评估要点的细节。语言和结构清楚, 简洁, 有条理, 易懂。

探究报告

女生清华考研笔试第一却落选, 举报“性别歧视”

目的: 学习探究实证来分析评估和判断信息、观念、诉求、决策

过程: 进行从确定问题开始的探究、分析和评估信息、论断、论证, 从而做出综合平衡的判断。以此写出这个过程和逻辑的报告 (样本: 2个案例研究)。

要求: 叙述事件、当事人一方和观点, 收集其理由和依据; 确立其诉求的问题本质和构成; 分析其论证类型和结构。然后搜寻事件另一方和问题相关的构成信息 (考试相关规定、要求和其他信息); 对比和评估双方信息和论证 (6方面); 最后做出综合平衡的判断。

写作 - 文字和结构要求如分析文, 总字数5000字以下。

正反正论证文 (二选一)

好好读书就有光明未来吗?

为什么大学就业难?

目的: 学习如何论证自己的观点

过程: 进行从问题分析、问题确定到探索信息, 分析评估对立面观念, 最后形成论证的结论, 然后将这样探究实证结果写成正反正的论证文纲要 (样本: p. 238-240)。

要求: 分析问题, 确定可研究的子问题; 对子问题进行要素分析; 收集相关信息; 确立对立双方理由和论证; 比较、评估双方论证 (6方面); 确立正方立场或者发展的综合立场对他方的应对。然后按正反正格式列出。

写作 - 按照导言, 论证 (正反正部分) 和结论三大部分列出大纲 (除导言和结论, 正反正部分各为400字)

大脑扫描显示，小狗也是人 格里高利·伯恩斯（（美）艾默理大学神经科学教授）

在过去两年里，我和同事一起训练狗在意识完全清醒且肢体无任何拘束的情况下接受磁共振(MRI)扫描仪的检查。我们的研究目标是，明确狗的脑部是如何工作的，以及更重要的，它们对我们人类有些什么样的看法。

迄今为止，我们已经训练了十几只狗，并对它们一一进行了扫描。扫描的结果不可避免地导向了这么一个结论：狗“也是人”。

由于狗不会说话，科学家们过去一直依靠观察它们的行为来推断它们在想些什么。这是个相当棘手的工作。你总不能去问一只狗：你为什么会做这件事？当然也没法问它：嗨，你感觉如何？

但现在，磁共振扫描可以直接观察狗的脑部，告诉狗的内在状态信息，这就摆脱了行为心理学的束缚。

经过几个月的训练，并在真正的磁共振扫描仪上摸索和试错之后，我们收获了满意的回报：第一张狗的脑部活动图谱。在我们的初步测试中，我们在扫描仪中测定了（我的狗）考利的脑部对两种手势的反应。在稍后的实验中（研究报告尚未发表），我们确定了其脑部负责对熟悉或陌生的狗和人类的气味加以区分的部位。

虽然我们只是刚刚才开始试图回答有关犬类脑部的基本问题，但不可忽视的是，犬类和人类有一个关键脑区在结构和功能方面均存在惊人的相似，这个脑区就是：尾状核。

尾状核位于脑干和脑皮层之间，富含多巴胺受体。尾状核在人类对喜欢的东西，如食物、爱情和金钱的期待反应中发挥着关键作用。那么，我们能否反过来应用这个相关性，通过测定尾状核的活动来推断某个人的思想？由于脑部不同部位之间的连接极其复杂，一般来说，根本不可能将某一单独的认知功能或情感精确定位到某一单独的脑区。

但尾状核可能是个例外。人们喜欢的许多东西都会令尾状核的特定部分呈现出激活状态，从而使得这些区域在整个脑中格外突出。由于尾状核的这种激活反应始终如一，在适当的环境下，我们可以用它来预测人们对食物、音乐乃至审美的偏好。

在对狗的研究中，我们发现，在看到指示食物的手势后，它们尾状核的活动有所增加。在初步的测试中，尾状核也可因熟悉的人的气味，或暂时离开视线的主人返回而激活。那么，这些研究结果是否证明：狗狗爱我们？不完全是这样。但是，很多可激活人类的尾状核的东西（这些东西往往与积极的情感相关）也可以激活狗的尾状核。神经科学家们称这是一种功能同源性，可用于指示犬类的情绪。

拥有体验积极情感（如爱和依恋）的能力就意味着狗拥有与人类儿童同等程度的感知能力。而这种能力表明，我们或许需要对我们如何对待狗加以反思。

很久以来，人们一直把狗当作一种所有物…。但现在，磁共振扫描的使用摆脱了行为心理学的局限性，我们再也不能隐瞒证据——狗（可能还有很多其他动物，尤其是我们的灵长类近亲）似乎与我们一样有七情六欲。这就意味着，我们必须重新考虑仅仅将它们作为所有物来对待是否适当。

也许有一天，我们将会看到人们根据脑成像研究结果，就狗狗们的权利展开唇枪舌战。

Why are the Dutch so tall?

By Gavin Haines 24th August 2020

The Dutch hold back the ocean with a complex system of windmills, canals, dykes and dunes (Credit: Elena Eliachevitch/Getty Images)

Heading west out of Rotterdam I walked along red-brick pavements, past crooked townhouses and pellucid canals, past fragrant Surinamese restaurants and out-of-town supermarkets, until I got to the port. And that's when I saw them: the cows, a herd of them, at sea, chewing the cud on a floating farm.

Moored up in a murky marina, the offshore farm looked more like a barn. It had a curved roof that reminded me of waves, and a gangplank that gave the cows access to an uninviting strip of grass on the dock. The sea breeze brought with it wafts of manure. In the distance, cranes loaded cargo onto ships and barges cruised by laden with petrochemicals. The herd looked incongruous in the industrial landscape.

Why are the Dutch so tall? (2)

By Gavin Haines 24th August 2020

A life raft for the dairy industry in a changing world, Rotterdam's floating farm was designed to be adaptable to rising seas and to reduce dairy's sizeable carbon hoofprint, hence the solar panels and rainwater-harvesting roof, which provides drinking water for the cows.

The animals themselves are also unwitting recyclers; their diet consists of grass cuttings from parks and golf courses, and potato peelings from Rotterdam's *frites* industry, which churns out the chunky chips Dutch people like to eat at almost any time of day, ideally slathered in mayo. "Our cows eat the biomass residue from the city and upcycle it into fresh and healthy milk," explained Minke van Wingerden, a partner in the project.

Why are the Dutch so tall? (3)

By Gavin Haines 24th August 2020

Since opening last year, the floating farm has become a curious attraction in Rotterdam. Believed to be the first of its kind, the project continues two longstanding Dutch traditions: conquering the ocean and dairy farming, which between them have not only helped shape the Netherlands, [much of which was stolen from the sea](#), but also its people, whose appetite for dairy has fuelled their remarkable growth.

God created the world, but the Dutch created the Netherlands

A land of giants, the Netherlands is the loftiest nation on Earth: the average height of a Dutch man is 182.5cm; a Dutch woman 168.7cm. By comparison their American counterparts measure 177.1cm and 163.5cm respectively. It wasn't always this way. A review of Dutch military records for [a study published by the Royal Society of London](#) found that in the mid-1800s, men in the Netherlands were actually among the shortest people in Europe.

"In 1860, Dutch military men were about 165cm tall," said Professor Louise Barrett of the University of Lethbridge, Canada, who was part of the study. "At that time men in the US were around 5cm taller." This, added Barrett, made Americans the world's tallest people.

Clogs have been worn by farmers in the Netherlands for centuries, and remain an important part of Dutch heritage (Credit: George Pachantouris/Getty Images)

Why are the Dutch so tall? (4)

By Gavin Haines 24th August 2020

Since then, however, there has been a remarkable role reversal: in just 160 years, Dutch men have shot up by 20cm, soaring past their American counterparts, who have grown just 6cm.

“That’s too fast for it just to be a genetic effect,” said Barrett, although she believes **natural selection played a part**. Indeed, her study found that the most fertile couples in the Netherlands – those who have the most children – are tall men and average-height women. And the most fertile American couples? Short women and average-height men.

Environmental factors have also sent the Dutch soaring, added Barrett, citing the Netherlands’ world-leading healthcare system, low levels of income inequality and excellent social welfare system as another explanation for them overtaking the Americans. “[In the Netherlands] everything is geared towards producing high-quality babies that then don’t suffer any of the kinds of things that reduce height,” she said. “Every time you mount an immune response it costs you energy that otherwise you would have put into growth.”

Then there’s the Dutch diet: people in the Netherlands have a voracious appetite for dairy, and studies suggest this has contributed to their increased height. “Calcium builds bone and growth is dependent on having a good supply of that,” Barrett explained.

Why are the Dutch so tall? (5)

By *Gavin Haines* 24th August 2020

According to Ben Coates, author of [Why the Dutch Are Different: A Journey into the Hidden Heart of the Netherlands](#), Dutch love of dairy is a result of the country's manmade geography.

Built on marshes previously only coveted by seabirds, says Coates, the Netherlands has been fighting the tide for centuries, pegging back the ocean with water-pumping windmills and water-channelling canals, and keeping it at bay with dykes. And on the reclaimed land, they built a nation that went on to rule the very waves it defeated. A popular local saying immodestly sums up this achievement. "God created the world, but the Dutch created the Netherlands."

The biggest single Dutch landgrab came with the construction of the Zuiderzee Works, a mind-boggling engineering project that saw the Netherlands steal another 1,620 sq km of land in the heart of the country. Work on this sprawling network of dams and dykes started in 1920 and many Dutch people never lived to see it finished, as it wasn't completed until 1997.

According to Mewis Hettinga, a retired cheese scientist from the city of Woerden, which lies 40km north-east of Rotterdam in the so-called "Cheese Valley", the silty reclaimed land was too acidic for growing vegetables or grains. "But it was very good for grass," he said.

The silty land reclaimed from the sea was unsuitable for growing vegetables or grains, but perfect for grazing (Credit: Frank Cornelissen/Getty Images)

Why are the Dutch so tall? (6)

By Gavin Haines 24th August 2020

Consequently, as the sea was pegged back, Dutch farmers turned not to cash crops like wheat, but **to cows, which grazed merrily on what had once been the ocean floor**. Hettinga, who runs cheesemaking workshops in Woerden and, by his own admission, “likes to talk about cheese”, says the pastures were particularly abundant in the northern province of Friesland, birthplace of the eponymous Friesian cow, now ubiquitous in the UK and Ireland. According to Coates, the breed has even left its hoofmarks on the White House lawn – US president William Howard Taft kept a Friesian named Pauline.

Calcium builds bone and growth is dependent on having a good supply of that

On reclaimed land, the country's dairy industry boomed and sent milk consumption soaring, along with the Dutch themselves. They remain among the biggest consumers of milk in the world.

What the Dutch didn't drink, says Coates, they turned into **cheeses like Gouda and Edam**, which are sold in giant, wax-covered wheels and take the name of the Dutch cities where they were created. Those eponymous cities, along with Woerden and beautiful Alkmaar, are amongst the best places to witness the Dutch love affair with dairy at its most ardent.

Alkmaar cheese market is the oldest and biggest in the Netherlands (Credit: Glow Images/Getty Images)

Why are the Dutch so tall? (7)

By Gavin Haines 24th August 2020

They host the most famous cheese markets in the Netherlands, where traders and farmers indulge in the time-honoured Dutch tradition of haggling animatedly over wheels of **cheese**, before settling on a price and sealing the deal with a handshake. In Woerden, farmers bring their wares to market on antiquated tractors and clip clop across the market square in their wooden clogs **which have chunky heels that add another couple of inches to their height**, as if they needed it. Someone who could do with that boost is me: topping out at 176cm, just shy of the average American, I do feel short in the lofty Netherlands, and at the floating farm I wondered if van Wingerden was trying to tell me something when she offered me a bottle of milk, produced on the water by her offshore herd. It was too late for a growth spurt, I conceded, but I accepted with grace and downed it in one.

女生清华考研笔试第一却落选， 举报“性别歧视”

2019年3月18日，一名微博用户发帖称，她在报考清华大学研究生过程中遭到性别歧视。

她是北京邮电大学19届毕业生，报考清华大学工程物理系核能与核技术工程（专硕），以专业初试笔试第一名成绩（376分）进入复试，同时，笔试成绩比清华的复试线更是高了66分。但面试结果仅60分。其称，在面试的20分钟内，老师没有考查专业知识，一直在问一些无关的问题。据她所述，在专业复试中，除她之外，其余13名全部为男性。

@Hardwell-is-life :我叫焦越，是名女生，我在报考清华大学研究生过程中遭到了严重的性别歧视。我是北京邮电大学本届19级毕业生，今年报考清华大学工程物理系核能与核技术工程(专硕)。我是报考本专业的初试笔试第一名376分，数学成绩更是比别人都要高。共录取7人，图1是复试名单，可以在清华大学工程物理系官网首页查到。... 全文

of Applied Physics from BUPT Beijing University of Posts and Telecommunications. I am good at mathematics and physics. My middle school physics teacher was very careful and interesting in teaching. He stimulated my interest in physics. When I applied for my undergraduate major, physics is my first choice. I believe that physics is the principle of all things, the origin of truth and the foundation of all disciplines.

From the first physics lesson of Junior 2, I was deeply attracted by Astrophysics and fascinated by the mystery of the universe. With the deepening of physics learning, I found that physics had many branches, each branch was worth further study. Reading the history of China's nuclear science development, I was moved by the spirit of Qian Xuesen, Yu Min and

你要写一篇讨论这样论 题的论文

“如果好好读书，就会有光明的未来！”

你需要构造一个研究提纲...

探究始于提出、明确和分析问题

要避免空泛、陈旧、毫无价值的议论。首先一定要解题，就是要问细节：
什么学习好会有什么光明的未来？什么是好好读书？什么是“光明的未来”？它们到底是什么关系？这就要从分析这个问题开始，了解它的对象和认知的构成和性质，搜寻它的方方面面的细节，然后在其中找到合适的子问题，以便作细致、具体的研究。

概括：探究性论文写作流程

- **解题**：用问题分析，发散思考问题的构成，然后会聚，确定可以研究的具体问题，从而避免毫无意义、空泛的老生常谈。
- 根据问题分析的线索，**搜寻**更多信息和现有的观点与论证。
- **分析**现有的正反观点和论证，然后进行**评估**（六大方面）。
- 基于此，**提出**自己观点：进行正-反-正的综合，坚持或修正原来的正方观点、采取反方观点、还是构造第三观点等。
- 到此，探究和实证的阶段完成，正-反-正论证文的主干已经具备。接着就是**写出**正-反-正格式的论文。注意语言、修辞、结构等等的清晰和条理性。

这样的探究式写作，不只是写了一篇文章，而是**发展了认识**。这是生产知识和合理决策的过程。我们的学生如果会这样，就能成为知识生产者，突破在竞争中的被动，成为世界的先进。
